Mind Makers
"where Imagination Meets Innovation"

We're Mind Makers, and we're seriously hyped to be a crew of super motivated, passionate students from the École Polytechnique de Sousse! We're just in our first year of electrical and automatic engineering, but we're already dreaming BIG. We're all totally into new tech, we love the idea of making learning awesome for everyone. This project is our chance to share our passion with robotics, programming, and innovation with younger students.

Thanks to our partner, Future Vision, and the insightful guidance from our tutor, we successfully developed engaging Arduino workshops tailored for children aged 12-15. Our goal was to seamlessly blend enjoyable activities with fundamental learning. Hosted at the Prep-school of Messadine on April 18, the workshop featured hands-on experiments, introductory robotics, and interactive demonstrations.

This initiative is so much more than just a school project for us; it's a heartfelt commitment to our community. We firmly believe that the children of today are the future of our country, and investing in them especially in their skills and potential is undeniably the best investment we can ever make for a brighter tomorrow. It's about building a better future, together. Arduino is a powerful yet accessible platform for learning electronics and programming, valued by all. By making its learning fun, we aimed to show children that anything is possible, and they CAN make a difference. We also sought to provide them with the tools to empower them and set them on the path to success.

The highlight of the workshop was an exhilarating Arduino car race! Students competed enthusiastically in head-to-head challenges, vying for exciting prizes. The impact was profound, resonating not only with the attending students but also deeply affecting our team. We were incredibly proud to see 22 participants, and we're proud to share that 82% of them reported being highly satisfied with their experience! We genuinely surprised ourselves by exceeding our own expectations for this initiative. This isn't an end ; it's just the beginning.
